

## Site Reliability Engineer

### Professional Summary

IT professional focused on supporting platforms using DevOps and GitOps tools, such as Docker, Kubernetes, Helm, GitHub Actions and GitLabCI and on developing back-end applications and automations, with Go and Python.

Has a solid track record with web applications, RESTful APIs, automations, integrations and messaging systems, but also has specific experience with front-end, embedded systems and other programming languages.

### Experience

#### JSRF Consulting

📅 January/2023 – December/2024

*Freelance Developer*

- Development of tools for event accreditation, reducing manual work and process time.
- SaaS development to simplify manual work in law firms.
- Development of chatbots to integrate customer services.

#### Banpará - Banco do estado do Pará

📅 August/2024 – December/2024

*Systems Analyst*

- Creation and standardization of legacy systems documentation required by the BACEN certification system.
- Development of the internal supplier contract management system.
- Standardization and updating of CI/CD systems tracks.

#### Jack Experts

📅 December/2024 – Present

*DevOps Analyst*

- Provisioning clusters with the company's standard stack: UI for management, monitoring and metrics collection, custom alerts, log centralization, scheduled backup, update and automation of routines.
- Development of a tool to automate healthcheck routines and reports.
- Migration of clusters between cloud providers, aiming for the lowest cost for the customer.
- Creation of Cloud Native applications; thus providing packages compatible with all the most widely used tools on the market.
- Development of tracks to automate the construction, provision and implementation of applications; thus minimizing manual work in the process and, therefore, human errors.

### Education

#### Estácio

*Technologist in Systems Analysis and Development*

📅 2023 - 2026  
📍 São Paulo - SP

#### University of Amazônia

*Gastronomy*

📅 2020 - 2022  
📍 Belém - PA
